Numa Fresh Marketplace

COLOUR LEGEND

- Black text — Feature is in the SRS AND implemented in the current system
- Red text — Feature is in the SRS but NOT YET implemented
- Yellow text — Feature EXISTS in system but is MISSING from the original SRS

1 PRODUCT OVERVIEW

Numa Fresh Marketplace is a multi-portal, production-grade halal grocery marketplace. It connects customers with local halal stores for online ordering and express pickup. The platform operates on a store-fulfilled model — stores handle all picking, packing, and fulfillment. Fresh halal meat cut on demand is the platform's primary differentiator.

1.1 What Makes Numa Fresh Different

- Store-Fulfilled: No platform shoppers or drivers — stores own the full fulfillment process
- Pickup-First: Express pickup (under 60 seconds) and curbside are the primary order types
- Custom Halal Meat: Cut on demand, weight-adjusted, charged by final actual weight
- Halal Certified Only: Every store must hold a valid halal certificate, verified by admin
- Muslim Community Focus: Eid/Qurbani system, Masjid partnerships, Urdu + Arabic language support
- Full Transparency: Every fee shown explicitly at checkout — no hidden charges

1.2 Platform Portals

Portal	URL	Users	Status
Customer Marketplace	/	End customers browsing and ordering	Implemented
Store Fulfillment Portal	/store-portal	Store owners and store staff	Implemented
Admin Panel	/admin	Platform administrators	Implemented
Store Application	/store-portal/apply	New stores applying (dedicated public URL)	Not implemented

& IN SYSTEM — NOT IN SRS

Three separate login portals implemented: /login (customer, teal theme), /store-login (store owner, amber theme), /admin-login (admin, dark slate theme). Each validates role and shows error for wrong-role accounts — not in original SRS.

2 USER ROLES & ACCESS CONTROL

The system uses role-based access control (RBAC). Every user is assigned one role, and all pages and API endpoints enforce that role. Admin actions are permanently logged.

2.1 Role Definitions

Role	Portal Access	Key Capabilities	Status
CUSTOMER	/	Browse stores, place orders, track orders, manage account	Implemented
STORE_OWNER	/store-portal	Manage store profile, products, orders, analytics, payouts	Implemented
STORE_STAFF	/store-portal (limited)	View and process orders, update item status, chat with customers	Not implemented
ADMIN	/admin	Approve stores and products, manage users, finance, settings	Implemented

2.2 Store Approval Flow

1. Owner registers and submits store application via /store-portal/onboarding
2. Store created with status: Pending — not visible to customers yet
3. Admin reviews: business info, halal certificate document, operating hours

4. Admin APPROVES !' store goes live on marketplace, owner receives email confirmation
5. Admin REJECTS !' reason stored, rejection email with reason sent to owner
6. Admin can also add a store directly from /admin/stores, bypassing the application queue

' NOT IMPLEMENTED

Rejection email with reason sent to applicant — not yet triggered automatically. Halal certificate PDF document viewer in admin panel not yet implemented.

2.3 Product Approval Flow

- Admin product approval queue at /admin/products/pending — lists all pending products with approve/reject actions
- APPROVED !' product goes live, store can view active products
- REJECTED !' store notified with reason via notification system
- ' Products created with Pending status (not visible while pending) — currently all products go live immediately
- ' Price/image updates after approval trigger re-approval automatically — not implemented

3 CUSTOMER MARKETPLACE

3.1 Homepage

- Hero section with store search bar and animated statistics (total stores, products, orders)
- Category quick-links: Fresh Halal Meat, Ethnic Spices, Dairy & Eggs, Frozen Foods, Bakery & Bread, Fresh Produce, Desi Pantry, Beverages
- Featured stores shown as interactive cards with rating, Halal badge, pickup time, fee
- "Fresh Meat Cut For You" promotional section explaining custom meat process
- How It Works section: 3 visual steps (Choose Store !' Add to Cart !' Pickup)
- ' Google Maps autocomplete in address/store search bar — text-based search only currently
- ' Seasonal Eid/Qurbani banner auto-displayed 30 days before Eid ul Adha — page exists but auto-trigger not implemented
- ' Language switcher in footer: English / Urdu / Arabic — i18n infrastructure exists but footer toggle not yet rendered

& IN SYSTEM — NOT IN SRS

AI Meal Planner feature cards on homepage (1-Day, 3-Day, Weekly, Monthly quick-launch). Functional site-wide product search bar navigating to /products?search=QUERY. Stats counter shows 10+ certified stores and 300+ products.

3.2 Store Discovery (/stores)

- Only approved and active stores shown to customers
- Filters: Open Now, Pickup Available, Curbside Available, Delivery Available, Halal Certified (default ON), Minimum Rating, Maximum Fee
- Sort options: Top Rated, Fastest Pickup, Lowest Fee
- Each store card: banner image, name, rating, Halal Certified badge (gold), Masjid Affiliated badge (if applicable), estimated pickup time, convenience fee, minimum order
- ' Sort by Nearest — location-based distance sort not implemented (requires geolocation API)
- City-based browsing URLs implemented: /stores/city/:city with a horizontal city-pill browsing strip on /stores — SEO-friendly, shows stores per city

3.3 Store Detail Page (/stores/[store-slug])

- Store banner with unique image per store, name, rating, operating hours, service type badges
- Halal certification badge with certification number and issuing body displayed
- Sticky horizontal category navigation — clicking smooth-scrolls to that product section
- Product grid with responsive columns (mobile / tablet / desktop)
- In-store search with instant filtering

- Tabs: Products, Reviews, Store Info
- ' **Product name displayed in English and Urdu — only English names currently**
- Compare/sale price displayed on product cards — struck-through compare price shown when comparePrice field set — IMPLEMENTED
- Low stock badge on product cards when qty < lowStockThreshold — IMPLEMENTED
- ' **Separate Operating Hours tab — hours shown inside Store Info tab only**

& IN SYSTEM — NOT IN SRS

All 10 stores have unique working banner images (distinct Unsplash photos in listing and detail). 300+ products across 10 stores (35–42 per store, 9+ categories each including store-specific specialty items).

3.4 Fresh Meat Product — Custom Order Modal

When a customer taps a Fresh Meat product, a 3-step customization modal opens:

- Step 1 — Cut Type: Visual selection cards — Whole / Half / Quarter / Boneless / Bone-In / Cubed / Ground / Custom
- Step 2 — Quantity: Weight selector (0.5 kg, 1 kg, 1.5 kg, 2 kg, or custom), estimated price auto-calculated
- Step 3 — Instructions: Marination preference, packaging preference, free-text special instructions

!9 IMPORTANT

Fresh meat is priced by final actual weight. The amount shown is an estimate. The card is pre-authorized — final charge applied after cutting and weighing.

3.5 Substitution Preferences (Packaged Items Only)

' NOT IMPLEMENTED

Substitution preferences at checkout are NOT yet implemented. Required: For every packaged item the customer selects one of four options — (1) No Replacement: remove item, partial refund auto-issued; (2) Replace with Similar: store picks best alternative; (3) Choose Specific: customer selects specific alternate product; (4) Contact Me First: store must message customer via chat before any change. Fresh meat items are never subject to substitution.

3.6 Checkout

Current system combines order type, tips, promo code, loyalty, and special instructions in a premium cart page. The full 4-step checkout specification is partially implemented:

Checkout Item / Fee	Status
Step 1 — Order Type (Express Pickup, Scheduled, Curbside, Home Delivery)	Implemented
Step 1 — Curbside vehicle entry (make/model/colour/plate)	Implemented
Step 2 — Substitution Preferences (per packaged item)	Not implemented
Subtotal, Convenience Fee (\$2.99), Curbside Fee (\$1.49), Delivery Fee (\$4.99)	Implemented
Promo Discount, Loyalty Discount (range slider), Tip (None/\$1/\$2/\$3/\$5/Custom)	Implemented
Estimated Total — clearly labelled as Estimated for meat orders	Implemented
Step 4 — Animated confirmation with QR code, store address, pickup time	QR code displayed on order tracking page (scannable order ID) — Implemented

3.7 Order Tracking (/account/orders/:id/track)

- Animated status progress bar: Order Placed ! Confirmed ! In Preparation ! Ready ! Completed
- Status updates pushed in real time via Socket.IO

- "I'm Here" button for Curbside orders — sends vehicle confirmation to store
- QR code (scannable order ID) displayed on order tracking page for express pickup at store counter — IMPLEMENTED
- ' Substitution Approval popup with 5-minute timer — not implemented
- ' Live in-app chat with store during order preparation — Socket.IO infrastructure exists but chat UI not built
- ' Items summary accordion: real-time status of each item (Found / Out of Stock / Substituted) — not implemented

3.8 Customer Account Pages

Route	Status
/account	Dashboard: active orders, loyalty points balance, quick stats — Implemented
/account/orders	Full order history with one-click Reorder button (POST /api/orders/:id/reorder) — Implemented
/account/addresses	Saved addresses with add/edit/delete — Implemented
/account/addresses — Google Maps autocomplete	Not implemented
/account/membership	Subscription plan management page — all 4 plans shown (Free/\$0, Basic/\$4.99, Premium/\$9.99, Family/\$14.99) — Implemented (Stripe billing pending)
/account/loyalty	Loyalty points balance, tier level, full transaction history — Implemented
/account/meal-planner	AI Halal Meal Planner — Implemented
/account/scheduled-orders	Recurring orders management page with pause/resume/cancel actions — IMPLEMENTED
/account/chat	Customer live chat support inbox page — IMPLEMENTED
/account/notifications	Notification preferences page — Implemented

4 STORE FULFILLMENT PORTAL

The store portal is designed for use on Android tablets in-store (primary) and desktop browsers. All elements use large touch targets and simplified navigation.

- ' Offline mode — order data cached locally and syncs when connection is restored — not implemented

4.1 Store Application (/store-portal/onboarding)

Multi-step onboarding wizard — current system has 4 of the 6 specified steps:

Step	Description	Status
Step 1 — Basic Info	Store name, phone, email, address, logo and banner image upload	Implemented
Step 2 — Halal Cert	Certificate number, issuing body, expiry date, document upload	Implemented
Step 3 — Hours	Per day open/closed toggle, opening/closing times, pickup slot duration, max orders per slot	Implemented
Step 4 — Services	Pickup, Curbside (+ fee), Delivery (+ fee + radius), minimum order amount	Implemented
Step 5 — Banking	Stripe Connect onboarding to receive payouts	Not in onboarding wizard
Step 6 — Submit	Full summary review. Status: Pending Admin Review. Admin notified instantly.	Submits directly — no pending state

4.2 Live Order Dashboard (/store-portal)

- Online/Offline toggle prominently displayed at top of screen
- Incoming order queue updates in real time — new orders appear via Socket.IO
- Each order card: order number, order type badge, pickup slot time, customer name, item list preview, estimated total
- One-tap Accept or Reject — Reject requires a reason to be selected
- Active orders section with status indicators and countdown timers
- Today's summary: Pending / In Preparation / Ready / Completed count, Total Revenue, Average Prep Time
- Audio alert for new incoming orders — implemented via Web Audio API triple-tone beep; fires when new order card appears in queue

4.3 Order Processing Screen (/store-portal/orders/:id)

- Full-screen, tablet-optimized view with large touch targets
- Item checklist: each item is a large card — staff taps FOUND, OUT OF STOCK, or SUBSTITUTE
- Mark Ready: customer receives push notification and SMS simultaneously
- ' Actual weight entry for fresh meat + automatic charge recalculation via Stripe — not implemented
- ' Partial refund auto-triggered when item removed via No Replacement — not automated
- ' Substitution flow (Replace Similar, Choose Specific, Contact First) — not implemented
- ' Final Summary confirmation sent to customer before marking Ready — not implemented
- Curbside mode: vehicle info (make/model/colour/plate) entered at checkout; displayed on store portal order detail — IMPLEMENTED
- Print Slip button on store portal order detail — window.print() with formatted slip — IMPLEMENTED

4.4 Product Management (/store-portal/products)

- Product fields: name, type, category, price, unit, stock quantity, images (up to 5)
- Fresh Meat extra fields: animal type, available cut types, price per kg, estimated weight range
- Halal Certified toggle per product — defaults ON
- Inventory buffer: system prevents orders beyond available stock quantity
- ' Status badges: Pending Approval / Approved — Live / Rejected — all products go live immediately currently
- Product name in Urdu field — urduName field added to store portal product form — IMPLEMENTED
- Compare/sale price field with struck-through display on product cards — IMPLEMENTED
- Barcode and SKU fields in product form — IMPLEMENTED
- ' Freshness label field (free text e.g. "Cut this morning") — system generates FRESH TODAY badge automatically
- Nutrition facts (calories, protein, carbs, fat, sodium) JSON field in product form — IMPLEMENTED
- ' Bulk CSV import: template download, upload, preview, error report — not implemented
- ' Quick inline stock edit (tap stock number to update without opening full form) — not implemented

4.5 Analytics (/store-portal/analytics)

- Date range picker: Today / This Week / This Month / Custom range
- Revenue over time — line chart
- Order volume — bar chart
- Top best-selling products — chart
- Order type breakdown — chart (Express / Curbside / Delivery)
- Peak hours heatmap grid (7 days × 24 hours, colour intensity = busiest times) — 7×24 grid backed by GET /api/store/analytics/peak-hours — IMPLEMENTED
- ' Average preparation time trend over selected period — not implemented
- Export: "Export CSV" button on analytics page downloads revenue/orders data — CSV export IMPLEMENTED; PDF export pending

4.6 Payouts (/store-portal/payouts)

- Shows: Gross Revenue, Platform Commission (7%), Net Payout Amount
- Payout schedule: weekly via Stripe Connect
- Full payout history with dates and amounts
- ' Chat with admin directly from payouts screen — not implemented

5 ADMIN PANEL

5.1 Admin Dashboard (/admin)

- KPI cards: Total GMV, Platform Revenue, Total Orders Today, Active Stores, Pending Approvals, Open Support Tickets
- Live activity feed: new orders, store approvals pending, refund requests — colour-coded
- Charts: GMV trend (30-day area chart), Orders per day (bar chart), Revenue by source (stacked chart)
- Pending action panel: store applications, product approvals, refund requests — all one-click actionable

5.2 Store Management (/admin/stores)

- Tabs: Pending Applications / Active Stores / Suspended / All Stores
- Pending application view: full store details, expandable info
- [APPROVE] !' store goes live, owner's role updated, confirmation email sent
- [REJECT] !' reason required, rejection email sent to applicant
- [Add Store Directly] !' admin fills store form, store created as Approved immediately
- Per active store: edit details, adjust commission rate, suspend/unsuspend, view analytics, trigger manual payout
- ' Halal certificate document viewer (PDF and image in-browser) in admin store management — not implemented
- ' Direct chat with store applicant from admin panel — not implemented

5.3 Product Approvals (/admin/products/pending)

- Dedicated product approval queue page at /admin/products/pending — implemented
- [APPROVE] !' product status updated to Approved, store notified
- [REJECT + Reason] !' store owner notified with reason; product marked rejected
- ' Products pending approval are still visible to customers — pending-status visibility gating not yet applied

5.4 Order Management (/admin/orders)

- Full order list with filters: Status, Store, Date Range, Order Type, Amount Range
- Order detail view: all items, full status timeline, fee breakdown, payment info
- Admin interventions: Issue full refund, Issue partial refund, Cancel order, Force-complete order
- Refund queue: pending refund requests — admin approves, partially approves, or rejects with reason

5.5 User Management (/admin/users)

- Filter by role: All / Customers / Store Owners / Admins
- Per user: view full profile and order history, suspend with reason and duration, permanently ban, verify manually, change role

5.6 Finance (/admin/finance)

- Revenue breakdown: Total GMV, commission collected (7%), convenience fees, net platform revenue — per period
- Store payouts table: store name, period, gross amount, commission deducted, net payout, status
- [Trigger Payout] !' initiates bank transfer to store's connected Stripe account
- ' Monthly P&L summary exportable as CSV — not implemented

5.7 Platform Settings (/admin/settings)

Setting	Default	Status
Commission Rate (default 7%, overridable per store)	7%	Implemented
Convenience Fee (platform-wide, shown at checkout)	Configurable	Implemented
Curbside Fee (optional, can be \$0)	Configurable	Implemented
Loyalty Points Rate (points per \$1 spent)	1 point / \$1	Implemented
Subscription Pricing (Basic, Premium, Family)	\$4.99–\$14.99	Settings field exists; customer billing not wired
Payout Schedule (weekly or bi-weekly)	Weekly	Implemented
Supported Cities (add/remove cities)	—	Not implemented
Email Templates editor	—	Email system exists; template editor not built
Maintenance Mode toggle	—	Not implemented

5.8 Chat, Support & Audit

- Support Tickets (/admin/support): ticket queue with Open / In Progress / Resolved tabs, admin replies, closes, or escalates
- Audit Log (/admin/audit): every admin action permanently logged with admin name, action, target, old/new value, IP address, timestamp — append-only
- Admin Chat (/admin/chat): conversation list + reply composer page built and added to admin sidebar — IMPLEMENTED (full Socket.IO real-time integration pending)

6 REAL-TIME SYSTEM & CHAT

The platform uses Socket.IO WebSocket connections for all real-time features, initialized with /customer, /store, and /admin namespaces with JWT authentication middleware.

6.1 Chat System

& PARTIALLY IMPLEMENTED

Chat UI pages built: /account/chat (customer inbox), /admin/chat (admin interface). Full real-time features (typing indicators, read receipts, image sharing) still pending. Socket.IO infrastructure with /customer, /store, /admin namespaces is active. Chat rooms linked to orders and /store-portal/chat remain to be built.

6.2 Real-Time Order Events

Event	Triggered When	Received By	Status
New Order	Customer places order	Store — animated card + audio triple-tone beep	Implemented
Order Status Update	Store advances status	Customer — status bar updates live	Implemented
Order Ready	Store marks ready	Customer — push notification + SMS	Implemented
Substitution Request	Store marks item out of stock	Customer — approval popup with timer	Not implemented
I'm Here (Curbside)	Customer taps I'm Here	Store — vehicle info alert	Implemented via Socket.IO
New Message (Chat)	Any party sends message	Recipient — live delivery, unread badge	Chat UI pages built; real-time delivery pending
Store Approval Needed	New application submitted	Admin — notification	Implemented
Product Approval Needed	Store submits new product	Admin — queue increments	Implemented — /admin/products/pending approval queue with approve/reject
Order Cancelled	Customer cancels before prep	Store — order removed from queue	Implemented

7 ORDER LIFECYCLE & SPECIAL FLOWS

7.1 Order Status Flow

Status	Meaning	Status
PENDING	Order placed — awaiting store confirmation	Implemented
STORE_CONFIRMED	Store accepted — preparation begins	Implemented
IN_PREPARATION	Staff is actively picking and packing	Implemented
REPLACEMENT_HANDLING	One or more items unavailable — substitution process active	Not implemented
READY_FOR_PICKUP	Order packed — customer notified via push + SMS	Implemented
OUT_FOR_DELIVERY	Store's driver has picked up the order (delivery orders)	Status exists
COMPLETED	QR code scanned / curbside delivered / delivery confirmed	Implemented
CANCELLED	Cancelled before IN_PREPARATION — only cancellation window	Implemented
REFUNDED	Admin processed a refund after completion	Implemented

!9 CANCELLATION RULE

Cancellation is ONLY allowed while order status is PENDING or STORE_CONFIRMED. Once preparation begins, cancellation is not possible. Automatic partial refunds are issued for items removed due to No Replacement substitution preference.

7.2 Fresh Meat Payment Flow

' NOT IMPLEMENTED

Fresh meat pre-authorization flow not yet implemented. Required: (1) Customer places order !' Stripe pre-authorizes estimated amount (card hold, not a charge). (2) Store cuts meat and enters actual weight on tablet. (3) System recalculates: final price = actual weight × price per kg. (4) Stripe PaymentIntent updated to final amount. (5) Final amount captured when order marked Completed. (6) If final weight exceeds estimate by more than 10%, customer is notified before capture.

7.3 Automated Recurring Orders

' NOT IMPLEMENTED

Automated recurring orders are not yet implemented. Required: Customer creates recurring order (store, items, frequency: weekly/bi-weekly/monthly, preferred day and time). System automatically places order at scheduled time. Customer receives notification 24 hours before each occurrence. Customer can skip, pause, or cancel from /account/scheduled-orders.

8 AI HALAL MEAL PLANNER

The AI Meal Planner is an intelligent grocery planning tool built exclusively for the halal market. It helps customers plan weekly meals, auto-generates a grocery list, and allows them to order everything with a single tap.

8.1 How It Works

Step	Description	Status
Step 1 — Set Preferences	Cuisine type (Pakistani / Middle Eastern / African / Mixed Halal), dietary style (Standard / Low-carb / High-protein / Diabetic-friendly), family size (1–10), weekly grocery budget	Implemented
Step 2 — Generated Meal Plan	AI generates halal meal plan: breakfast, lunch, dinner per day. All recipes use halal-certified ingredients. Customer can swap individual meals via "Swap Meal" button (POST /api/meal-planner/swap-meal).	Implemented — including individual meal swap
Step 3 — Auto Grocery List	Ingredients extracted from plan, duplicates combined, quantities summed, full list with estimated cost per item shown	Implemented
Step 4 — Select Store & Order	Customer selects preferred nearby store. Available items auto-matched. "Add All to Cart" proceeds to checkout.	Implemented; store selection per plan not yet built

8.2 Meal Plan Features

- Partial cart: if some items unavailable at selected store, available items added — missing items shown separately
- Saved meal plans: customer can name and save any generated plan (e.g. "Ramadan Plan"), view all saved plans, load into active view, or delete — fully implemented (POST/GET/DELETE /api/meal-planner/plans)
- ' Auto-order toggle: saved plan set to auto-order weekly — not implemented
- ' Seasonal suggestions: Eid-specific meal plans during Eid season — not implemented
- Nutritional overview: estimated weekly calories, protein, carbs, and fat macro panel displayed under generated meal plan — IMPLEMENTED

& IN SYSTEM — NOT IN SRS

Plan duration selector beyond weekly: 1-Day (3 meals), 3-Day (9 meals), Weekly (21 meals), Monthly (90 meals). Protein preference multi-selector (Chicken, Beef, Lamb, Goat, Fish/Seafood, Vegetarian). Per-meal "Add to Cart" button. Budget utilization progress bar. Per-day accordion with prep/cook time and ingredient count. Budget presets (\$50–\$400). Generating animation with AI scanning 300+ products text.

9 PAYMENT SYSTEM & SUBSCRIPTIONS

9.1 Customer Payments

- All payments processed via Stripe — card details never touch platform servers (PCI compliant)
- Stripe webhook signatures verified on every incoming webhook event
- Full refunds: admin-processed from order management
- ' Standard orders: payment captured upon store confirmation — currently captured at checkout
- ' Meat orders: pre-authorization hold placed, actual charge after final weight — not implemented
- ' Partial refunds: automatically issued when items removed via No Replacement — not automated

9.2 Store Payouts

- Each store connects bank account via Stripe Connect at onboarding
- Platform calculates: Gross Revenue " 7% Commission = Net Payout Amount
- Payouts processed weekly (Monday) via cron job — automatically
- Admin can trigger manual payout from /admin/finance at any time
- All payout records stored — stores view full history from /store-portal/payouts

9.3 Subscription Plans

' NOT IMPLEMENTED

Subscription plans are defined in admin settings but the customer-facing subscription flow is not yet built. Plans: Free (\$0/month, standard access); Basic (\$4.99/month, free delivery on orders over \$35); Premium (\$9.99/month, free delivery over \$25 + 5% cashback); Family (\$14.99/month, all Premium benefits + 3 linked family accounts). /account/membership page for plan management does not yet exist.

9.4 Loyalty Points System

- Customers earn 1 point per \$1 spent on every order
- Points redeemable at checkout — 100 points = \$1 off (range slider in cart)
- Tiers based on total lifetime points: Bronze / Silver / Gold / Platinum
- Points expire after 12 months of account inactivity — 7-day warning notification sent (cron job implemented)
- 200 bonus loyalty points awarded on first-ever order — backend checks order count, applies bonus automatically on POST /api/orders
- Referral bonus: unique code (NUMA + UUID prefix) shown on /account; POST /api/users/apply-referral awards 100 pts to referee, 50 pts to referrer — IMPLEMENTED
- ' Eid special order bonus points (extra 50 pts during Eid window) — not yet implemented

10 NOTIFICATION SYSTEM

The platform delivers notifications via in-app (stored and retrievable), email (Nodemailer with branded HTML templates), and SMS (Twilio scaffold with env vars and SMS templates).

Event	In-App	Email	SMS	Status
Order Confirmed by Store	'	'	—	Implemented
Order In Preparation	'	—	—	Implemented
Substitution Request Needs Approval	'	—	'	Not implemented (substitution system not built)
Order Ready for Pickup	'	'	'	Implemented
Order Completed — Receipt	'	'	—	Implemented
Refund Processed	'	'	—	Implemented
Product Approved / Rejected	'	'	—	Email not fully triggered (no approval queue)
Store Approved / Rejected	'	'	—	Partial — email template exists
Loyalty Points Earned	'	—	—	Implemented
Points Expiring Soon	'	'	—	Implemented (cron job)
Weekly Store Earnings Summary	—	'	—	Implemented (weekly cron)
Recurring Order Reminder (24hrs before)	'	'	—	Not implemented (recurring orders not built)

' All notifications stored with English and Urdu versions — bilingual content not yet implemented

11 EID SPECIALS & QURBANI SYSTEM

11.1 Eid/Qurbani Ordering (/eid-specials)

- Seasonal landing page at /eid-specials — exists as customer-facing page
- Eid grocery bundles: curated product bundles shown from stores
- ' Automatically displayed / promoted 30 days before Eid ul Adha — auto-trigger banner not implemented
- ' Advance Qurbani pre-orders: whole animal / half / quarter with preferred cut style — not implemented
- ' Family name for dedication/niyyah recorded on the order — not implemented
- ' Eid pickup date selection: preferred Eid morning pickup slot — not implemented
- ' Arabic calligraphy header and Eid Mubarak greeting in English, Urdu, and Arabic — not implemented
- Countdown timer to Eid ul-Adha shown prominently on /eid-specials — live real-time DD:HH:MM:SS display, auto-calculated from next Eid date

11.2 Masjid Partnerships

- Stores can be marked as Masjid Affiliated — special badge shown on store card
- Masjid name shown on store detail page
- ' Jumma Day Specials: stores can set Friday-specific promotions — not implemented
- ' Community bulk orders: group order feature for Masjid communities — not implemented

12 SEO, MULTILINGUAL & ACCESSIBILITY

12.1 URL Structure & SEO

URL	Status
/ (Homepage)	Implemented — SEO title, meta description, OG tags
/stores (All stores)	Implemented — indexable, 84-URL sitemap confirmed
/stores/city/[city] (City-specific store list)	Implemented — /stores/city/:city page with city browsing pill strip; shows count + store grid per city
/stores/[store-slug] (Store detail)	Implemented — JSON-LD LocalBusiness + AggregateRating
/products/[product-slug] (Product detail)	Implemented — /products/:slug with JSON-LD Product schema, meta tags, add-to-cart, compare price, barcode
/halal-meat	Implemented — indexable landing page
/eid-specials	Implemented — indexable seasonal page
/api/sitemap.xml	Implemented — auto-generated XML sitemap (84 URLs)
/api/robots.txt	Implemented — public pages allowed, private portals blocked

12.2 Multilingual Support

- Languages: English (default), Urdu, Arabic — i18n infrastructure with i18next exists
- Language toggle in navigation header — EN/UR/AR selector rendered in navbar; RTL layout activated for Arabic and Urdu via localStorage + html dir attribute
- Arabic/Urdu RTL layout implemented — direction set document-wide when user selects RTL language
- ' Product names and email templates support bilingual content — not yet implemented
- ' Store names can be entered in both English and Urdu — only English name field exists

12.3 Accessibility

- Minimum touch target size on all interactive elements (critical for tablet store portal)
- Keyboard navigation supported throughout all portals
- ' Screen reader support: ARIA labels on all interactive components — partial, not systematically implemented
- ' Colour contrast ratios meet WCAG 2.1 AA standards — not formally audited
- ' Skeleton loaders used instead of spinners — spinners used currently; skeleton loaders not systematically implemented

13 REVENUE MODEL

Revenue Stream	Default Amount	Details	Status
Store Commission	7% of subtotal	Deducted from store gross at payout. Admin can set per-store rates.	Implemented
Convenience Fee	Platform setting	Charged to customer per order. Shown transparently at checkout.	Implemented
Curbside Fee	Optional (can be \$0)	Added to customer total only for curbside orders.	Implemented
Delivery Fee	Store-set amount	For store-managed delivery. Commission still applies.	Implemented
Subscription Plans	\$4.99–\$14.99/mo	Basic, Premium, Family plans billed through Stripe Subscriptions	Settings defined; billing not wired
Advertising (Phase 2)	CPM / CPC	Halal CPG brands pay for sponsored placements — Phase 2 feature	Not yet built

14 SECURITY & COMPLIANCE

14.1 Authentication & Authorization

- All user sessions managed with JSON Web Tokens — access tokens expire in 15 minutes, refresh tokens in 7 days
- Passwords stored using bcrypt hashing — raw passwords never stored
- Every API endpoint enforces role check — unauthorized access returns 403
- All admin actions permanently recorded in the audit log
- Google OAuth implemented as alternative login method — GET /api/auth/google initiates OAuth flow; callback exchanges code for JWT tokens and redirects to app; "Continue with Google" button on login page

14.2 Data & API Security

- Security headers applied to all responses via Helmet.js (prevents clickjacking, XSS, MIME sniffing)
- Rate limiting on all endpoints — auth endpoints especially restricted (express-rate-limit)
- All user inputs validated and sanitized before processing (Zod validation + express-mongo-sanitize)
- Payment card data never stored on platform — entirely handled by Stripe (PCI compliant)
- Stripe webhook signatures verified on every incoming webhook event
- ' File uploads restricted: type validation, maximum 5 MB per file — explicit size enforcement not yet implemented

14.3 Privacy Compliance (CCPA — USA)

- Privacy policy page at /privacy — 11 sections covering CCPA data rights, retention, cookies, third-party sharing
- Cookie consent banner — sliding CCPA/privacy-compliant banner on first visit with Accept/Decline; preference persisted in localStorage
- Account deletion — DELETE /api/users/me soft-deletes and anonymizes user (email !' deleted_USER_ID@deleted.com, name/phone cleared, account marked inactive)
- Personal data export — GET /api/users/me/export returns complete JSON download of all stored personal data as an attachment
- Every transactional email includes an unsubscribe link and Privacy Policy link in the footer template — IMPLEMENTED
- ' Order financial data explicitly retained for 7 years per US financial regulations — retention policy not enforced in DB

16 TECHNICAL ARCHITECTURE (SYSTEM — NOT IN ORIGINAL SRS)

This entire section describes the current technical stack — not included in the original SRS.

16.1 Technology Stack

Layer	Technology
Frontend	React 18 + TypeScript, Vite, TailwindCSS, shadcn/ui, Framer Motion, React Query
Backend	Node.js + Express, TypeScript, Drizzle ORM, PostgreSQL
Real-Time	Socket.IO 4 with /customer, /store, /admin namespaces + JWT auth middleware
Payments	Stripe (PaymentIntent, Stripe Connect, Webhooks)
Email	Nodemailer with branded HTML email templates
SMS	Twilio scaffold (env vars configured, templates ready)
AI	OpenAI GPT — AI Halal Meal Planner generation
Cron Jobs	node-cron — pickup-slots, analytics-rollup, weekly-payouts, loyalty-expiry
Security	Helmet.js, express-rate-limit, bcrypt, Zod validation, express-mongo-sanitize
SEO	React Helmet, JSON-LD structured data, sitemap.xml (84 URLs), robots.txt
i18n	i18next — English, Urdu, Arabic translation files (RTL pending)
Monorepo	pnpm workspace — @workspace/api-server, @workspace/halal-grocery

16.2 Key System Components Built

- & 10 halal grocery stores with unique store profiles, banners, operating hours, service types
- & 300+ products across all 10 stores (35–42 per store, 9+ categories each)
- & Three separate login portals: /login (customer), /store-login (store owner), /admin-login (admin)
- & Full admin panel with dashboard, store/order/user/finance management, settings, audit log
- & Store onboarding 4-step wizard with halal certificate upload
- & AI Meal Planner: 4 plan types (1-Day, 3-Day, Weekly, Monthly) + protein preference selector
- & Premium cart page: sticky sidebar, loyalty slider, tip options, order type selection, trust badges
- & Cron jobs for pickup slot generation, analytics rollup, weekly payouts, loyalty point expiry
- & Socket.IO real-time engine with JWT auth across 3 namespaces
- & Stripe integration: PaymentIntent, Stripe Connect onboarding, webhook verification
- & SEO: 84-URL sitemap, robots.txt, JSON-LD LocalBusiness + AggregateRating on store pages

15 FUTURE ROADMAP

Phase 2 — Planned

The following features are planned for Phase 2 development:

- ' Multi-Store Cart: allow customers to order from multiple stores in one checkout
- ' Native Mobile Apps: iOS and Android apps
- ' Store-Managed Delivery Network: stores onboard their own drivers through the platform
- ' Full Qurbani System: advance whole-animal bookings, family niyyah, Eid-day pickup slots
- ' Advertising Platform: halal CPG brands run sponsored product placements within marketplace

Phase 3 — Planned

- ' POS Integration: automated inventory sync with Square, Shopify, and Clover POS systems
- ' Health Benefits Integration: insurance and employer-funded grocery benefit programs

- ' AI Substitution Learning: substitution recommendations improve over time based on acceptance history
- ' Geographic Expansion: UK, Australia, UAE markets

APPENDIX SUMMARY OF IMPLEMENTATION GAPS

All Implemented Features (Green)

Feature Implemented	SRS Section
' Language toggle (EN/UR/AR) in Navbar; RTL layout set for Arabic/Urdu via localStorage	12.2
' Cookie consent banner (sliding, with accept/decline, CCPA/privacy-compliant)	14.3
' Privacy Policy page (/privacy) — 11 sections covering CCPA/US privacy rights	14.3
' /account/membership page — all 4 plans (Free/\$0, Basic/\$4.99, Premium/\$9.99, Family/\$14.99)	9.3
' Product approval queue (/admin/products/pending) — approve/reject flow with POST endpoints	2.2, 5.3
' One-click Reorder button on order history — re-adds items to cart via POST /api/orders/:id/reorder	3.8
' Audio alert (Web Audio API triple-tone) for new orders in store portal dashboard	4.2
' Eid ul-Adha countdown timer on /eid-specials — live real-time DD:HH:MM:SS display	11.1
' Bonus 200 loyalty points for first-ever order (backend, POST /api/orders)	9.4
' Eid Specials link added to Navbar (desktop + mobile) with moon icon	11.1
' Membership Plans link in Navbar user dropdown and in Footer	9.3
' Product Approvals link in Admin sidebar navigation (Package icon)	2.2
' Footer: Privacy Policy link updated to /privacy; Membership Plans added	14.3
' Saved Meal Plans — customers can name, save, load, and delete plans; meal_plans DB table + POST/GET/DELETE /api/meal-planner/plans	8.2
' City-based store URLs — /stores/city/:city page with count + store grid; city browsing pill strip on /stores page	3.2, 12.1
' CCPA data export — GET /api/users/me/export returns full JSON of personal data as downloadable attachment	14.3
' CCPA account deletion — DELETE /api/users/me soft-deletes and anonymizes user record (email, name, phone cleared)	14.3
' Google OAuth — GET /api/auth/google + /api/auth/google/callback; JWT tokens issued; "Continue with Google" button on login page	14.1
' QR code (order ID) on order tracking page — customers can scan to confirm pickup at counter	3.6
' Vehicle info (make/model/colour/plate) fields at curbside checkout; displayed on store-portal-order detail	3.6
' Product fields in store portal: Urdu name, compare price (strike-through), barcode, SKU, nutrition JSON, low stock threshold	4.4
' Store CSV Export: store-portal analytics "Export CSV" downloads revenue + orders chart; admin finance "Export CSV" downloads payout table	4.5, 5.6
' Peak Hours Heatmap — 7×24 grid in store analytics; backend GET /api/store/analytics/peak-hours (90-day rolling window)	4.5
' Individual Meal Swap — "Swap Meal" button per meal card; AI regenerates single meal via POST /api/meal-planner/swap-meal	8.1
' Nutritional Overview — estimated macro panel (calories, protein, carbs, fat) rendered under generated meal plan	8.2
' Product Detail Pages — /products/:slug with full info, JSON-LD Product schema, meta tags, add-to-cart, compare price, barcode	12.1
' Print Slip — "Print Slip" button on store-portal order detail calls window.print() with formatted slip	4.3

Feature Implemented	SRS Section
' Referral Code — unique NUMA+UUID code shown on /account; POST /api/users/apply-referral awards 100 pts to referee + 50 pts to referrer	9.4
' /account/chat — customer live chat inbox page with support widget UI	3.8
' /account/scheduled-orders — recurring orders management page with pause/resume/cancel actions	3.8, 7.3
' /admin/chat — admin live chat interface with conversation list + reply composer; added to admin sidebar	5.8
' Unsubscribe link + Privacy Policy link in every transactional email footer template	14.3
' CCPA/CPRA privacy preferences — GET/PATCH /api/users/me/privacy-preferences; doNotSell + limitSensitiveData columns in DB; toggles in account.tsx	14.3
' CCPA/CPRA privacy policy page — 14 sections covering CCPA rights, Do Not Sell, Limit Sensitive Data, CAN-SPAM, 7-year retention, breach notification	14.3
' "Do Not Sell or Share My Personal Information" link in Footer legal strip; CCPA quick-rights cards on privacy page	14.3

Features in SRS Still Not Implemented (Red)

#	Feature / Requirement	SRS Section
1	STORE_STAFF role and limited portal access	2
2	Store approval: rejection email notifications to store owner	2.1
3	Google Maps autocomplete in address entry and store search	3.1, 3.8
4	Substitution preferences at checkout (4 options per packaged item)	3.5, 3.6
5	Substitution approval popup with 5-minute countdown on tracking page	3.7
6	Store portal tablet offline mode with local cache sync	4
7	Actual weight entry for fresh meat + automatic charge recalculation	4.3, 7.2
8	Bulk product CSV import in store portal	4.4
9	Chat with admin from payouts screen	4.6
10	Halal cert PDF/image document viewer in admin store management	5.2
11	Full chat system: typing indicators, read receipts, image sharing via Socket.IO	6.1
12	Stripe pre-authorization hold for fresh meat; final capture after weight entry	7.2, 9.1
13	Automated recurring orders with cron scheduling (UI exists; backend scheduling pending)	7.3
14	Stripe billing integration for membership plans (UI complete, Stripe pending)	9.3
15	Auto-order toggle on saved meal plans (nutritional overview implemented; auto-order not yet)	8.2
16	Jumma Day Specials and community bulk/group orders for Masjids	11.2
17	ARIA labels, WCAG 2.1 AA audit, skeleton loaders on all pages	12.3
18	Monthly P&L CSV export in admin finance	5.6
19	All roadmap items (Phase 2 & 3)	15

Features in System Not in Original SRS (Yellow)

#	Feature Added to System (not in original SRS)
1	Three separate login portals (/login, /store-login, /admin-login) with distinct visual themes and role enforcement
2	AI Meal Planner — 4 plan durations: 1-Day, 3-Day, Weekly, Monthly (SRS only specified 7-day weekly)
3	Protein preference multi-selector in Meal Planner (Chicken, Beef, Lamb, Goat, Fish/Seafood, Vegetarian)
4	Per-meal "Add to Cart" button — add individual meal's ingredients without adding full plan
5	Budget utilization progress bar in Meal Planner showing % of budget consumed
6	AI Meal Planner feature cards on homepage (1-Day, 3-Day, Weekly, Monthly quick-launch)
7	300+ products across 10 stores (35–42 per store, 9+ categories, store-specific specialty items)
8	All 10 stores have unique banner images in both listing cards and store detail pages
9	Functional site-wide product search bar on homepage navigating to /products?search=
10	Cart: sticky sidebar, category image fallbacks, trust badges, Custom tip option, savings summary
11	Socket.IO with /customer, /store, /admin namespaces + JWT auth middleware
12	Cron jobs: pickup-slots, analytics-rollup, weekly-payouts, loyalty-expiry
13	Separate Technical Architecture section documenting stack and components
