

NUMA FRESH MARKETPLACE

Software Requirements Specification

Version 1.0 · April 2026 · Final

Halal Grocery Marketplace — Full Production Platform

Document Type	Version	Status	Classification	Date
Software Requirements Specification	1.0	Final	Confidential	April 2026

1. PRODUCT OVERVIEW

Numa Fresh Marketplace is a multi-portal, production-grade halal grocery marketplace. It connects customers with local halal stores for online ordering and express pickup. The platform operates on a store-fulfilled model — stores handle all picking, packing, and fulfillment. Fresh halal meat cut on demand is the platform's primary differentiator.

1.1 What Makes Numa Fresh Different

- Store-Fulfilled: No platform shoppers or drivers — stores own the full fulfillment process
- Pickup-First: Express pickup (under 60 seconds) and curbside are the primary order types
- Custom Halal Meat: Cut on demand, weight-adjusted, charged by final actual weight
- Halal Certified Only: Every store must hold a valid halal certificate, verified by admin
- Muslim Community Focus: Eid/Qurbani system, Masjid partnerships, Urdu + Arabic language support
- Full Transparency: Every fee shown explicitly at checkout — no hidden charges

1.2 Platform Portals

Portal	URL	Users
Customer Marketplace	/	End customers browsing and ordering
Store Fulfillment Portal	/store-portal	Store owners and store staff
Admin Panel	/admin	Platform administrators
Store Application	/store-portal/apply	New stores applying to join the platform

2. USER ROLES & ACCESS CONTROL

The system uses role-based access control (RBAC). Every user is assigned one role, and all pages and API endpoints enforce that role. Admin actions are permanently logged.

Role	Portal Access	Key Capabilities
CUSTOMER	/ (Customer App)	Browse stores, place orders, track orders, chat with store, manage account
STORE_OWNER	/store-portal	Manage store profile, products, orders, staff, analytics, payouts
STORE_STAFF	/store-portal (limited)	View and process orders, update item status, chat with customers
ADMIN	/admin	Approve stores and products, manage users, finance, platform settings

2.1 Store Approval Flow

1. Owner registers, navigates to /store-portal/apply and submits store application
2. Store created with status: Pending — not visible to customers yet
3. Admin reviews: business info, halal certificate document, operating hours
4. Admin APPROVES → store goes live on marketplace, owner receives email confirmation
5. Admin REJECTS → reason stored, rejection email with reason sent to owner
6. Admin can also add a store directly from /admin/stores, bypassing the application queue

2.2 Product Approval Flow

7. Store owner adds a product via /store-portal/products — product created with status: Pending
8. Product is NOT visible to customers while pending
9. Admin reviews from /admin/products/pending queue — image, name, price, halal status
10. APPROVED → product goes live on marketplace
11. REJECTED → store owner notified with specific reason, can edit and resubmit
12. If price or images are significantly updated after approval, re-approval is automatically triggered

3. CUSTOMER MARKETPLACE

3.1 Homepage

- Hero section with address/store search bar powered by Google Maps autocomplete
- Animated statistics: total stores, products, and orders fulfilled
- Category quick-links: Fresh Halal Meat, Ethnic Spices, Dairy & Eggs, Frozen Foods, Bakery & Bread, Fresh Produce, Desi Pantry, Beverages
- Featured stores near the customer's location — shown as interactive cards
- 'Fresh Meat Cut For You' promotional section explaining the custom meat process
- How It Works section: 3 visual steps (Choose Store → Add to Cart → Pickup in 60s)
- Seasonal Eid/Qurbani banner — automatically displayed 30 days before Eid ul Adha
- Language switcher in footer: English / Urdu / Arabic

3.2 Store Discovery (/stores)

- Only approved and active stores are shown to customers
- Filters: Open Now, Pickup Available, Curbside Available, Delivery Available, Halal Certified (default ON), Minimum Rating, Maximum Fee
- Sort options: Nearest / Top Rated / Fastest Pickup / Lowest Fee
- Each store card shows: logo, name, rating, Halal Certified badge (gold), Masjid Affiliated badge (if applicable), estimated pickup time, convenience fee, minimum order amount
- City-based URLs for SEO: /stores/toronto, /stores/mississauga, etc.

3.3 Store Detail Page (/stores/[city]/[store-slug])

- Store banner, logo, name, rating, operating hours, and service type badges
- Halal certification badge with certification number and issuing body displayed
- Sticky horizontal category navigation — clicking smooth-scrolls to that product section
- Product grid: 2 columns on mobile, 3 on tablet, 4 on desktop
- Each product card shows: image, name in English and Urdu, price, compare/sale price, freshness label (e.g., 'Cut this morning'), low stock indicator
- In-store search with instant filtering
- Tabs: Products, Reviews, Store Info, Operating Hours

3.4 Fresh Meat Product — Custom Order Modal

When a customer taps a Fresh Meat product, a 3-step customization modal opens before adding to cart:

- Step 1 — Cut Type: Visual selection cards — Whole / Half / Quarter / Boneless / Bone-In / Cubed / Ground / Custom
- Step 2 — Quantity: Weight selector (0.5 kg, 1 kg, 1.5 kg, 2 kg, or custom), estimated price auto-calculated and displayed

- Step 3 — Instructions: Marination preference, packaging preference, free-text special instructions

Important

Fresh meat is priced by final actual weight. The amount shown is an estimate. The card is pre-authorized — final charge applied after cutting and weighing.

3.5 Substitution Preferences (Packaged Items Only)

At checkout Step 2, for every packaged item in the cart, the customer must select one of four options:

No Replacement	If unavailable, remove the item. Partial refund issued automatically.
Replace with Similar	Store staff picks the best alternative from the same category.
Choose Specific	Customer selects a specific alternate product from a dropdown list.
Contact Me First	Store must message the customer via chat before making any change.

- Fresh meat items are never subject to substitution — they are cut to order

3.6 Checkout (4 Steps)

13. Order Type Selection
 - Express Pickup: Customer selects a pickup time slot from the store's availability calendar
 - Curbside Pickup: Customer enters vehicle make/model/colour/plate number, selects pickup slot, sees curbside fee
 - Store Delivery: Customer selects a saved address or adds a new one, delivery fee and estimated time shown
14. Substitution Preferences: Per packaged item — customer selects preference (see 3.5)
15. Review & Payment: Full transparent fee breakdown shown before payment

Subtotal	Sum of all item prices
Convenience Fee	Platform fee — shown explicitly, no hiding
Curbside Fee	Only if curbside order type selected
Delivery Fee	Only if store delivery selected
Promo Discount	Applied if valid promo code entered
Loyalty Discount	Applied if customer chooses to redeem points
Tip (optional)	Customer selects tip for store staff — None / \$1 / \$2 / \$3 / Custom
Estimated Total	Sum of all above — clearly labeled as 'Estimated' for meat orders

16. Confirmation: Animated success screen with order number, QR code, store address, pickup time, and Track Order button

3.7 Order Tracking (/account/orders/:id/track)

- Live animated status progress bar: Order Placed → Confirmed → In Preparation → Ready → Completed
- Status updates pushed in real time — page refreshes automatically without manual reload

- Large QR code displayed on screen for express pickup scan at store counter
- 'I'm Here' button: appears when order is Ready and order type is Curbside — one tap sends vehicle info to store
- Substitution Approval popup: if store requests a substitution, customer sees the request with a 5-minute approval timer — auto-accepts if no response
- Live in-app chat with store during order preparation
- Items summary accordion: shows real-time status of each item (Found / Out of Stock / Substituted)

3.8 Customer Account

/account	Dashboard: active orders, loyalty points balance, quick stats
/account/orders	Full order history with one-click Reorder button per past order
/account/addresses	Saved addresses with Google Maps autocomplete for adding new ones
/account/membership	Subscription plan management — upgrade, downgrade, cancel
/account/loyalty	Loyalty points balance, tier level, full transaction history
/account/meal-planner	AI Halal Meal Planner (see Section 7)
/account/scheduled-orders	Recurring orders — weekly staples automatically reordered
/account/chat	Standalone chat inbox for all conversations with stores and support
/account/notifications	Notification preferences and language selection

4. STORE FULFILLMENT PORTAL

The store portal is designed for use on Android tablets in-store (primary) and desktop browsers. All elements use large touch targets and simplified navigation. The app works offline — order data is cached locally and syncs when connection is restored.

4.1 Store Application (/store-portal/apply)

A 6-step application wizard. Progress is saved between sessions so owners can complete it across multiple sittings.

Step 1 — Basic Info	Store name (English + optional Urdu), phone, email, full address with map pin, logo and banner image upload
Step 2 — Halal Cert	Certificate number, issuing body name, expiry date, certificate document upload (PDF or image)
Step 3 — Hours	Per day open/closed toggle, opening and closing times, pickup slot duration, max orders per slot
Step 4 — Services	Enable Pickup, Curbside (+ fee), Store Delivery (+ fee + radius), minimum order amount
Step 5 — Banking	Stripe Connect onboarding to receive payouts — owner completes on Stripe's secure page
Step 6 — Submit	Full summary review, submit button. Status shows 'Pending Admin Review'. Admin notified instantly.

4.2 Live Order Dashboard (/store-portal)

- Online/Offline toggle — prominently displayed at top of screen. Updates real-time presence.
- Incoming order queue updates in real time — new orders appear with an audio alert and slide-in animation
- Each order card shows: order number, order type badge, pickup slot time, customer name, item list preview, estimated total
- One-tap Accept or Reject — Reject requires a reason to be selected
- Active orders section shows in-progress orders with status indicators and countdown timers
- Today's summary: Pending / In Preparation / Ready / Completed count, Total Revenue, Average Prep Time

4.3 Order Processing Screen (/store-portal/orders/:id)

- Full-screen, tablet-optimized view with large touch targets throughout
- Item checklist: each item is a large card — staff taps FOUND, OUT OF STOCK, or SUBSTITUTE

For packaged items marked Out of Stock:

- No Replacement → item removed, partial refund auto-triggered

- Replace Similar → staff selects best match, customer notified for approval
- Choose Specific → staff confirms pre-selected substitute
- Contact First → chat opens with customer and store cannot proceed until customer responds

For fresh meat items:

- Staff sees animal type, cut type, and customer instructions prominently displayed
 - After cutting, staff enters actual weight on tablet — system recalculates and updates the final charge automatically
- Final Summary button: once all items handled, staff sends the full summary to customer for confirmation before marking Ready
 - Mark Ready: customer receives push notification and SMS simultaneously
 - Curbside mode: when customer taps 'I'm Here', the vehicle details (Make / Model / Colour / Plate) appear in large text on the tablet screen
 - Print Slip: generates two slips — main order slip for packing, and a separate meat counter slip with cut details only

4.4 Product Management (/store-portal/products)

- Status badges per product: Pending Approval (amber) / Approved — Live (green) / Rejected (red with reason shown)
- Standard product fields: name (English + optional Urdu), type, category, subcategory, price, compare price, unit, stock quantity, images (up to 5), barcode/SKU
- Fresh Meat extra fields: animal type (Chicken / Beef / Lamb / Goat / Veal), available cut types (multi-select), price per kg, estimated weight range
- Freshness label field: free text, e.g., 'Cut this morning' or 'Freshly arrived today'
- Halal Certified toggle per product — defaults to ON
- Nutrition facts accordion: calories, protein, carbs, fat, sodium
- Bulk import: download CSV template, upload filled file, preview before importing, error report for failed rows
- Quick inline stock edit: tap the stock number to update it directly without opening the full form
- Inventory buffer: system automatically prevents orders beyond available stock quantity

4.5 Analytics (/store-portal/analytics)

- Date range picker: Today / This Week / This Month / Custom range
- Revenue over time — line chart
- Order volume — bar chart
- Peak hours — heatmap grid (7 days × 24 hours, colour intensity shows busiest times)
- Top 10 best-selling products — horizontal bar chart
- Order type breakdown — pie chart (Express / Curbside / Delivery)
- Average preparation time trend over selected period
- Export: download data as CSV or PDF report

4.6 Payouts (/store-portal/payouts)

- Shows: Gross Revenue, Platform Commission (7% shown explicitly), Net Payout Amount
- Payout schedule: weekly or bi-weekly via Stripe Connect
- Full payout history with dates and amounts
- Chat with admin directly from this screen for any payout queries

5. ADMIN PANEL

5.1 Admin Dashboard (/admin)

- KPI cards: Total GMV, Platform Revenue, Total Orders Today, Active Stores, Pending Approvals, Open Support Tickets
- Live activity feed: new orders, store approvals pending, refund requests — colour-coded and updating in real time
- Charts: GMV trend (30-day area chart), Orders per day (bar chart), Revenue by source (commission vs fees, stacked chart)
- Pending action panel: store applications, product approvals, refund requests — all one-click actionable

5.2 Store Management (/admin/stores)

- Tabs: Pending Applications / Active Stores / Suspended / All Stores
- Pending application view: full store details, expandable info, halal certificate document viewer (PDF and image supported in-browser), direct chat with applicant
- [APPROVE] → store goes live, owner's role updated, confirmation email sent automatically
- [REJECT] → reason required, rejection email with reason sent to applicant
- [Add Store Directly] → admin fills the full store form, store created as Approved immediately — bypasses application queue
- Per active store: edit details, adjust commission rate, suspend or unsuspend, view analytics, trigger manual payout

5.3 Product Approvals (/admin/products/pending)

- Queue showing all pending products across all stores
- Each entry: product image, name, price, product type, submitting store name
- [APPROVE] → product live on marketplace, store notified via notification and email
- [REJECT + Reason] → store owner notified with the specific reason; product can be edited and resubmitted

5.4 Order Management (/admin/orders)

- Full order list with filters: Status, Store, Date Range, Order Type, Amount Range
- Order detail view: all items (including meat specs and actual weights recorded by store), full status timeline, fee breakdown, payment info
- Admin interventions: Issue full refund, Issue partial refund, Cancel order (if eligible), Force-complete order
- Refund queue: pending refund requests with customer reason — admin approves, partially approves, or rejects with reason

5.5 User Management (/admin/users)

- Filter by role: All / Customers / Store Owners / Staff / Admins
- Per user: view full profile and order history, suspend with reason and duration, permanently ban, verify manually, change role

5.6 Finance (/admin/finance)

- Revenue breakdown: Total GMV, commission collected (7%), convenience fees, net platform revenue — per period
- Store payouts table: store name, period, gross amount, commission deducted, net payout, current status
- [Trigger Payout] → initiates bank transfer to store's connected account
- Monthly P&L summary — exportable as CSV

5.7 Platform Settings (/admin/settings)

Commission Rate	Default 7% — overridable per individual store
Convenience Fee	Default platform-wide amount, shown to customers at checkout
Curbside Fee	Optional — can be set to \$0
Loyalty Points Rate	Points earned per \$1 spent (default: 1 point per \$1)
Subscription Pricing	Monthly prices for Basic, Premium, and Family plans
Payout Schedule	Weekly or bi-weekly payout frequency
Supported Cities	Add or remove cities where the platform operates
Email Templates	Edit content and layout of all transactional emails
Maintenance Mode	Platform-wide toggle — shows maintenance page to all users

5.8 Chat, Support & Audit

- Admin Chat (/admin/chat): view and join any order chat, message any customer or store owner, handle support conversations
- Support Tickets (/admin/support): ticket queue with Open / In Progress / Resolved tabs, admin replies, closes, or escalates tickets
- Audit Log (/admin/audit): every admin action permanently logged with: admin name, action, target, old value, new value, IP address, timestamp — append-only, cannot be edited or deleted

6. REAL-TIME SYSTEM & CHAT

The platform uses WebSocket connections for all real-time features. All chat messages are permanently stored in the database and can be retrieved at any time. The chat system connects all three roles — customer, store, and admin — in shared order-linked rooms.

6.1 Chat System

- Chat rooms are linked to orders — all conversation about an order stays in one room
- All three roles (Customer, Store Staff, Admin) can participate in the same order room
- Admin can view and join any chat room for moderation or support
- Features: typing indicator (live animated dots), read receipts, image sharing, quick reply templates
- Standalone chat inbox at /account/chat (customer) and /store-portal/chat (store) — lists all conversations

6.2 Real-Time Order Events

Event	Triggered When	Received By
New Order	Customer places order	Store — audio alert + animated card
Order Status Update	Store advances order status	Customer — status bar updates live
Order Ready	Store marks order ready	Customer — push notification + SMS
Substitution Request	Store marks item out of stock	Customer — approval popup with timer
I'm Here (Curbside)	Customer taps I'm Here button	Store — vehicle info alert on tablet
Customer Arrived	I'm Here confirmed	Store — large vehicle info card shown
New Message	Any party sends a chat message	Recipient — live delivery, unread badge
Store Approval Needed	New application submitted	Admin — instant notification
Product Approval Needed	Store submits new product	Admin — queue count increments
Order Cancelled	Customer cancels before prep	Store — order removed from queue

7. ORDER LIFECYCLE & SPECIAL FLOWS

7.1 Order Status Flow

PENDING	Order placed — awaiting store confirmation
STORE_CONFIRMED	Store accepted the order — preparation begins
IN_PREPARATION	Staff is actively picking and packing items
REPLACEMENT_HANDLING	One or more items unavailable — substitution process active
READY_FOR_PICKUP	Order packed — customer notified via push + SMS
OUT_FOR_DELIVERY	Store's driver has picked up the order (delivery orders only)
COMPLETED	QR code scanned at pickup / curbside delivered / delivery confirmed
CANCELLED	Cancelled before IN_PREPARATION status — only window for cancellation
REFUNDED	Admin processed a refund after completion

Cancellation Rule	Cancellation is ONLY allowed while order status is PENDING or STORE_CONFIRMED. Once preparation begins, cancellation is not possible. Automatic partial refunds are issued for any items removed due to 'No Replacement' substitution preference.
-------------------	---

7.2 Fresh Meat Payment Flow

- Customer places order — Stripe pre-authorizes the estimated amount (card hold, not a charge)
- Store cuts meat and enters the actual weight on the tablet
- System recalculates: final price = actual weight × price per kg
- Stripe PaymentIntent is updated to the final amount
- Final amount is captured (charged) when order is marked Completed
- If final weight exceeds estimate by more than 10%, customer is notified before capture

7.3 Automated Recurring Orders

- Customer creates a recurring order: selects store, adds items, sets frequency (weekly / bi-weekly / monthly), sets preferred day and time
- System automatically places the order at the scheduled time
- Customer receives a notification 24 hours before each scheduled order as a reminder
- Customer can skip the next occurrence, pause the recurring order, or cancel it at any time from /account/scheduled-orders

8. AI HALAL MEAL PLANNER

The AI Meal Planner is an intelligent grocery planning tool built exclusively for the halal market. It helps customers plan weekly meals, auto-generates a grocery list, and allows them to order everything with a single tap.

8.1 How It Works

Step 1 — Set Preferences	Customer selects: Cuisine type (Pakistani / Middle Eastern / African / Mixed Halal), Dietary style (Standard / Low-carb / High-protein / Diabetic-friendly), Family size (1–10 people), Weekly grocery budget
Step 2 — Generated Meal Plan	System generates a 7-day halal meal plan: breakfast, lunch, and dinner for each day. All recipes use halal-certified ingredients only. Customer can swap individual meals they don't like.
Step 3 — Auto Grocery List	System extracts all ingredients from the 7-day plan, combines duplicates, sums quantities, and displays the full consolidated grocery list with estimated cost per item.
Step 4 — Select Store & Order	Customer selects their preferred nearby store. Items available in that store are auto-matched. Customer taps 'Add All to Cart' and proceeds to checkout.

8.2 Meal Plan Features

- Saved meal plans: customer can name and save plans (e.g., 'Ramadan Plan', 'Winter Bulk Plan')
- Auto-order toggle: customer can set a saved plan to auto-order every week — functions like a recurring order
- Partial cart: if some items are unavailable at the selected store, only available items are added — missing items shown separately
- Seasonal suggestions: Eid-specific meal plans highlighted during Eid season (biryani, qorma, special desserts)
- Nutritional overview: estimated weekly calories and macros shown for the generated plan

9. PAYMENT SYSTEM & SUBSCRIPTIONS

9.1 Customer Payments

- All payments processed via Stripe — card details never touch the platform servers
- Standard orders: payment captured immediately upon store confirmation
- Meat orders: pre-authorization hold placed, actual charge applied after final weight entered
- Partial refunds: automatically issued when items removed due to 'No Replacement' preference
- Full refunds: admin-processed within 48 hours of order completion if customer requests

9.2 Store Payouts

- Each store connects a bank account via Stripe at onboarding — required before going live
- Platform calculates: Gross Revenue – 7% Commission = Net Payout Amount
- Payouts processed weekly (Monday) or bi-weekly, automatically
- Admin can trigger manual payout for any store at any time from /admin/finance
- All payout records stored — stores view full history from /store-portal/payouts

9.3 Subscription Plans

Plan	Price	Key Benefits
Free	\$0 / month	Standard access, standard convenience fees apply
Basic	\$4.99 / month	Free delivery on orders over \$35
Premium	\$9.99 / month	Free delivery over \$25 + 5% cashback on all orders
Family	\$14.99 / month	All Premium benefits + 3 linked family member accounts

9.4 Loyalty Points System

- Customers earn 1 point per \$1 spent on every order
- Points redeemable at checkout as a discount — 100 points = \$1 off
- Tiers based on total lifetime points: Bronze / Silver / Gold / Platinum
- Bonus points: awarded on referrals, first order, Eid special orders
- Points expire after 12 months of account inactivity — 7-day warning notification sent before expiry

10. NOTIFICATION SYSTEM

Every notification is delivered through multiple channels simultaneously: in-app (stored and retrievable), email with brand-consistent HTML templates, and SMS for time-sensitive events.

Event	In-App	Email	SMS
Order Confirmed by Store	✓	✓	—
Order In Preparation	✓	—	—
Substitution Request Needs Approval	✓	—	✓
Order Ready for Pickup	✓	✓	✓
Curbside — Staff Coming to Vehicle	✓	—	✓
Order Completed — Receipt	✓	✓	—
Refund Processed	✓	✓	—
Product Approved / Rejected	✓	✓	—
Store Approved / Rejected	✓	✓	—
Loyalty Points Earned	✓	—	—
Points Expiring Soon	✓	✓	—
Weekly Store Earnings Summary	—	✓	—
Recurring Order Reminder (24hrs before)	✓	✓	—

- All notifications stored with English and Urdu versions — delivered in user's preferred language
- SMS messages kept concise — example: 'Your Numa Fresh order is ready! Show QR code at [Store]. Order #NF-XXXX'

11. EID SPECIALS & QURBANI SYSTEM

11.1 Eid/Qurbani Ordering (/eid-specials)

- Seasonal landing page — automatically displayed 30 days before Eid ul Adha
- Advance Qurbani pre-orders: customer selects whole animal / half / quarter with preferred cut style
- Family name for dedication/niyyah recorded on the order
- Eid pickup date selection: customer chooses their preferred Eid morning pickup slot
- Eid grocery bundles: curated product bundles from stores (biryani ingredients, sweets, dates, etc.)
- Arabic calligraphy header and Eid Mubarak greeting in English, Urdu, and Arabic
- Countdown timer to Eid date shown prominently

11.2 Masjid Partnerships

- Stores can be marked as Masjid Affiliated — special badge shown on store card
- Masjid name shown on store detail page
- Jumma Day Specials: stores can set Friday-specific promotions
- Community bulk orders: groups from a Masjid can use the Group Order feature to order together

12. SEO, MULTILINGUAL & ACCESSIBILITY

12.1 URL Structure & SEO

/	Homepage — indexable
/stores	All halal stores — indexable
/stores/[city]	City-specific store list — indexable, keyword-rich
/stores/[city]/[store-slug]	Store detail — indexable, structured data
/products/[product-slug]	Product detail — indexable, rich snippet data
/halal-meat	Fresh halal meat landing page — indexable
/eid-specials	Eid and Qurbani seasonal page — indexable
/sitemap.xml	Auto-generated XML sitemap — all public pages
/admin /store-portal /account	Not indexed — blocked in robots.txt

- Every public page includes: SEO title, meta description, canonical URL, Open Graph tags, Twitter Card tags
- Structured data (JSON-LD): WebSite on homepage, LocalBusiness + AggregateRating on store pages, Product + Offer on product pages
- robots.txt: public pages allowed, private portals blocked
- All images: descriptive alt text, lazy loading, WebP format for fast loading

12.2 Multilingual Support

- Languages: English (default), Urdu, Arabic
- Language toggle in navigation header — preference saved to user account
- Arabic/Urdu text uses appropriate font and right-to-left (RTL) layout
- Product names, notification messages, and email templates all support bilingual content
- Store names can be entered in both English and Urdu

12.3 Accessibility

- Minimum touch target size 48px on all interactive elements (critical for tablet store portal)
- Keyboard navigation supported throughout all portals
- Screen reader support: proper ARIA labels on all interactive components
- Colour contrast ratios meet WCAG 2.1 AA standards
- Skeleton loaders used instead of spinners — prevents layout shift during loading

13. REVENUE MODEL

Revenue Stream	Default Amount	Details
Store Commission	7% of order subtotal	Deducted from store gross at payout. Admin can set per-store rates.
Convenience Fee	Set in platform settings	Charged to customer per order. Shown transparently at checkout.
Curbside Fee	Optional — store sets amount	Can be \$0. Added to customer total only for curbside orders.
Delivery Fee	Store-set amount	For store-managed delivery. Commission still applies to delivery orders.
Subscription Plans	\$4.99 – \$14.99 / month	Basic, Premium, Family plans billed through Stripe Subscriptions.
Advertising (Future)	CPM / CPC	Halal CPG brands pay for sponsored product placements — Phase 2 feature.

14. SECURITY & COMPLIANCE

14.1 Authentication & Authorization

- All user sessions managed with JSON Web Tokens — access tokens expire in 15 minutes, refresh tokens in 7 days
- Passwords stored using bcrypt hashing — raw passwords never stored
- Google OAuth supported as an alternative login method
- Every API endpoint enforces role check — unauthorized access returns 403
- All admin actions permanently recorded in the audit log

14.2 Data & API Security

- Security headers applied to all responses (prevents clickjacking, XSS, MIME sniffing)
- Rate limiting on all endpoints — auth endpoints especially restricted to prevent brute force
- All user inputs validated and sanitized before processing — prevents injection attacks
- File uploads restricted: type validation, maximum 5 MB per file
- Payment card data never stored on platform — entirely handled by Stripe (PCI compliant)
- Stripe webhook signatures verified on every incoming webhook event

14.3 Privacy Compliance (PIPEDA — Canada)

- Privacy policy page with clear explanation of what data is collected and how it is used
- Cookie consent banner shown on first visit
- Customers can permanently delete their account and all personal data
- Customers can export all their personal data on request
- Every email includes an unsubscribe link
- Order financial data retained for 7 years per Canadian financial regulations — all other personal data deletable on request

15. FUTURE ROADMAP

Phase 2 — Planned

- Multi-Store Cart: allow customers to order from multiple stores in one checkout
- Native Mobile Apps: iOS and Android apps
- Store-Managed Delivery Network: stores onboard their own drivers through the platform
- Full Qurbani System: advance whole-animal bookings, family niyyah, Eid-day pickup slots
- Advertising Platform: halal CPG brands run sponsored product placements within the marketplace

Phase 3 — Planned

- POS Integration: automated inventory sync with Square, Shopify, and Clover POS systems
- Health Benefits Integration: insurance and employer-funded grocery benefit programs
- AI Substitution Learning: substitution recommendations improve over time based on acceptance history
- Geographic Expansion: UK, Australia, UAE markets
